

SAVAGE PROPS LLC

BOX

AI

**SMARTER INVENTORY FOR
REAL LIFE**

- Track, visualize, and understand what you own — instantly.

WHERE IS IT? WHO HAS IT?

HOW MANY DO WE HAVE?

- Small businesses, studios, and households waste hours hunting for items or rebuying things they already own.
- No simple, visual inventory tool exists for real-world stuff: tools, props, decorations, & donations.
- Existing solutions are too complex, expensive, or manual.

THE MARKET OPPORTUNITY

33 million small businesses in the U.S. alone.

Over 50,000 storage facilities nationwide capturing even a small percentage means massive potential.

Billions spent annually on storage, organization, and inventory systems.

AI-driven image recognition can now unlock this untapped sector.

TARGET USERS

Everyday Organizers and Homeowners

E-commerce sellers and resellers

Artists, prop masters, personal shoppers

1 in 6 Americans rent a storage unit

BOX AI USES VISUAL RECOGNITION TO IDENTIFY, LABEL, AND CATEGORIZE STORED ITEMS AUTOMATICALLY

Take a photo of your box or bin-AI scans and builds the inventory list.

Dictate, type, or manually edit details

All boxes are searchable and exportable.

CORE FEATURES

- AI visual recognition of photos
- Editable box names and tags
- Voice dictation (powered by Whisper)
- Manual entry and AI-assisted sorting
- Smart search and future layout mapping

Exportable
inventory labels
and spreadsheets

Multi User &
Dynamic Tracking
Capability

Dynamic visual industries need dynamic visual solutions

FOUNDER STORY

Nichole Wleklinski

- Built from real pain: years managing film props, studio gear, and personal storage chaos within old systems.
- Needed a better way to onboard teams, locate assets, and stop re-buying what already existed.
- Designed for creators, organizers, and operators with inventory turnover who value efficiency and clarity.
- Founder background: film industry production, prop management, and small business leadership.

COMPETITIVE ADVANTAGE

- Simpler than enterprise inventory tools.
- Smarter than traditional labeling.
- Uses real-world images instead of barcodes.
- Adapts to user workflows & scalable for individuals or teams.

*Feels like Google Photos meets P-Touch,
built for the physical world*

IMPACT AND BENEFITS

Creates visibility and monetary value of owned items.

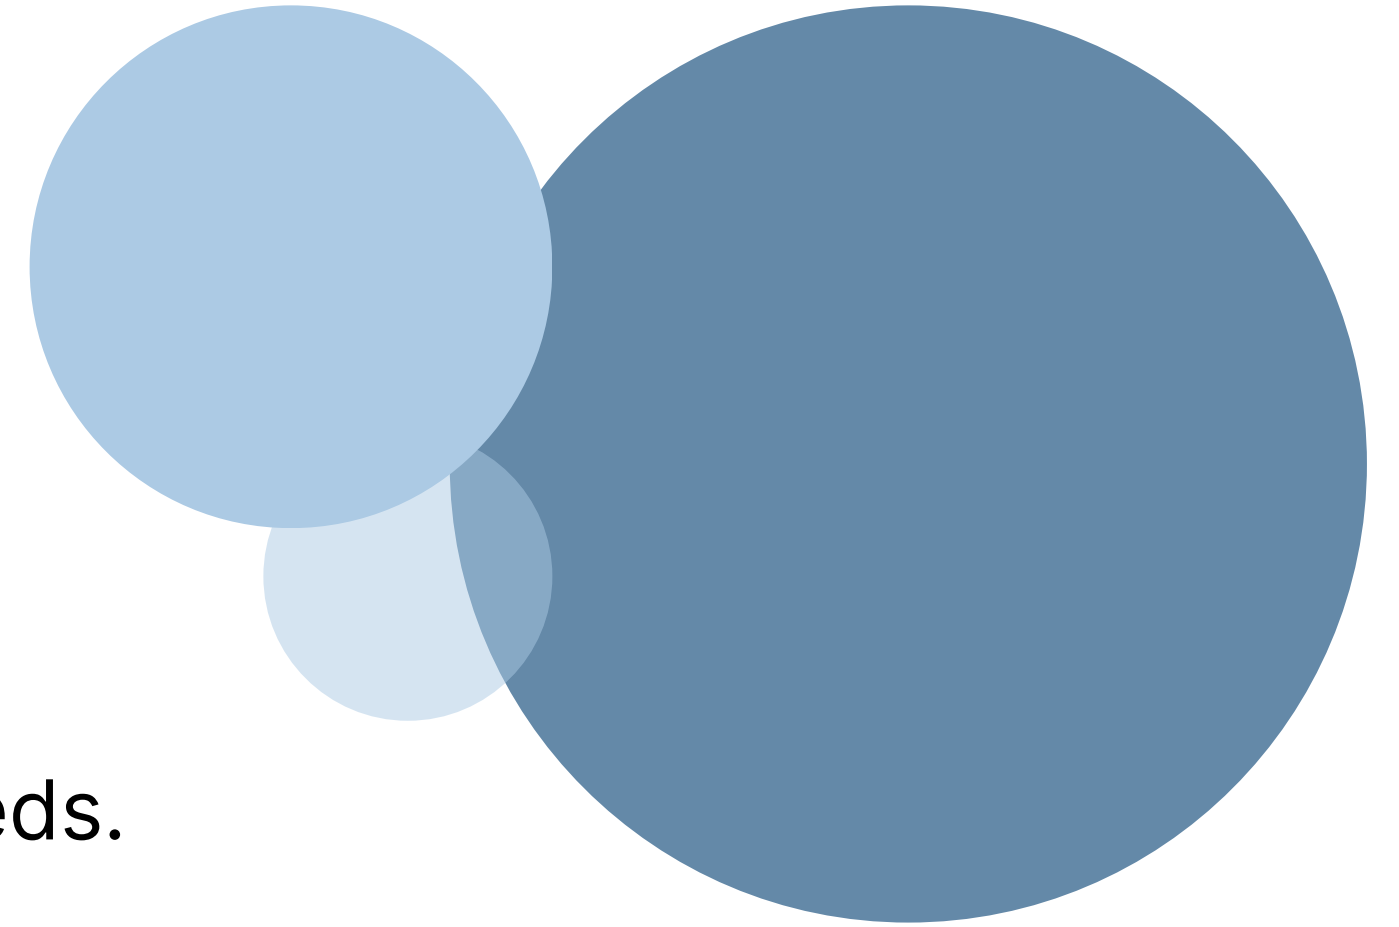

Saves time locating inventory.

Prevents duplicate purchases.

Supports better planning, insurance documentation, and sustainability.

Reduces waste and improves efficiency.

GROWTH AND SCALING

Scales naturally with user needs.

Add-on features: layout planning, multi-user collaboration, location tracking

.

Future: predictive inventory, valuation tracking, and AR-based box mapping

.

Monetization via subscription, cloud storage, and API access.

STRATEGIC PARTNERS OPPORTUNITY

Storage Unit Enterprise Company Add-on Licenses

Retailers like The Container Store, Home Depot, or IKEA

Prop houses and studio asset managers

Small business chambers and inventory software integrations

Potential licensing and API partnerships for item recognition data.

WHY NOW?

Legal Services

- AI visual tech (like GPT-Vision and Whisper) finally makes this possible.
-

Consulting Services

- Rising consumer interest in organization and home optimization.
-

Financial Services

- No direct competitors in visual-first household or SMB inventory space.

THE ASK

Seeking seed funding and beta testers.

Build toward scalable MVP and integration-ready backend

Timeline: 3–6 months to production-ready launch.
